the work in your hand contains three main chapters covering the chemistry of the condensed phase in the atmosphere first the different forms of atmospheric waters precipitation fog and clouds dew and secondly dust now mostly termed particulate matter and more scientifically atmospheric aerosol a third section treats the gases in the atmosphere an introductory chapter covers the roots of the term atmospheric chemistry in its relations to chemistry in general and biogeochemistry as the chemistry of the climate system furthermore a brief overview of understanding chemical reactions in aqueous and gaseous phase is given it is my aim to pay respect to all persons who studied the substances in the air to those who made small and to them who made giant contributions for the progress in atmospheric science i m not a historian who is able to present the past from a true perspective of their time this also would not be my aim if possible however i try to interpret the past almost limited to experimental fi ndings in the nineteenth century through current values without dismissal of the problems and ideas of earlier scientists in this way it is possible to draw some ideas on the historical chemical state of the air hence i name this voyage critical however nowhere in this book it is my attention to express my criticism to colleagues and scientifi c ancestors great scientists too were subject to errors doing science consists from the permanent loop observation interpretation conclusion and again testing against new observation if this volume can contribute more than to be a nice story on

atmospheric chemistry then hopefully it inspires the reader to more critical reading of scientific publications and not to forget the older one 2022 asli choice awards winner the book won the annual atmospheric science librarians international asli award for details see here aslionline.org/wp/2022-asli-choice-awards-winners
